

Questions

- **Ownership of NFT**
 - Should we use a single NFT in a vaulted approach or individual NFTs for each user?
 - A callback cannot loop over all liquidity positions of each user
- **Hook Callbacks**
 - Do we need to rebalance the hedge in real-time during beforeSwap?
 - Does our usecase actually need hook callbacks?
 - Are dynamic fees an option for IL offsetting?
- **Hook vs Vault**
 - It seems a similar product could be launched using a vault contract system.
 - What benefits do Hooks offer for real-time actions for our hedge scenario?
 - Can the hook itself be a vault manager? We believe yes
- **Hedge**
 - Should the Hook directly call external DeFi Protocols to hedge, or should this be off-chain triggered?
 - How do we adjust leverage, hedge size, and price range dynamically?
 - If the hedge fails do we need a fallback? if yes, how?
- **user experience and market fit**
 - Do users trust a hook or vault that manages liquidity for them?
 - Should users input parameters or is it a black box?
 - Can we restrict the permissions of what the hook/vault can do
